Avian Sex Allocation and Ornamental Coloration

A study on blue tits

Peter Korsten

Avian Sex Allocation and Ornamental Coloration
A study on blue tits

The research reported in this thesis was carried out at the Animal Ecology Group which is part of the Centre for Ecological and Evolutionary Studies of the University of Groningen, P.O. Box 14, 9750 AA Haren, The Netherlands. The research was financially supported by a grant from the Netherlands Organisation for Scientific Research (NWO) awarded to J. Komdeur (ALW grant 810.67.022). Production of this thesis was funded by the University of Groningen, the Centre for Ecological and Evolutionary Studies and Avantes b.v.

Contents

CHAPTER 1	General introduction	9
Part I – Inheritance of plumage UV coloration		
CHAPTER 2	Heritable variation in sexually selected structural coloration in blue tits	25
Part II – Female reproductive adjustment to male UV coloration		
CHAPTER 3	Effectiveness of a commonly-used technique for experimentally reducing plumage UV reflectance	45
CHAPTER 4	Primary sex ratio adjustment to experimentally reduced male UV attractiveness	55
CHAPTER 5	Rapid changes in maternal yolk hormone deposition in response to manipulated male attractiveness	73
Part III – UV coloration as a signal in inter-individual competition		
CHAPTER 6	UV signalling is not involved in male-male territorial conflict in the blue tit	89
CHAPTER 7	Absence of status signalling by structurally based ultraviolet plumage in wintering blue tits	107
CHAPTER 8	General discussion	125
